

The Trinity Urban Forest project by the class of Climate Entrepreneurs 2024.

Conor and Andre setup Urban Forest.ie to promote biodiversity and community climate action. Having completed Climate Entrepreneurship PG at TCD in 2024, the class were motivated to complete a project that would educate and inspire others to help increase biodiversity in Trinity. Catherine Cleary had already started a 'pocket forest' using the **Miyawaki method** to accelerate growth of trees and shrubs and we were inspired and decided to extend the mini forest by preparing and planting a further 30m². Trinity provided 50% of the funding and the class raised the other half of funding through a GoFundme campaign. The trees were sourced from the not-for-profit group Sonairte, (which is derived from an Irish word meaning 'positive strength') based in Laytown Co. Meath.

The prep: The ground was prepared by John Parnell, Conor Davis and Andre Baumann, by spreading 90kg of coffee grinds, donated by Poppies café, to the 30m² area to be planted on November 4th 2024. This was followed by covering the area with cardboard and then loading 3 tons of mulch.

INSERT Pic of planting

The Planting: The planting took place on December 13th

Shrubs: Hawthorn, Blackthorn, Dog Rose & Spindle

Trees: Alder, Hazel, Silver Birch and Rowan
